

AsiaSat provides complete, end-to-end solutions for a diverse range of maritime segments. Our maritime services are available through our extensive coverage over major shipping routes, managed hub, terrestrial connectivity, professional engineering support and system integration, with data plans, antenna bundled packages and value-added services customised to serve maritime operation, crews and passengers at affordable price.

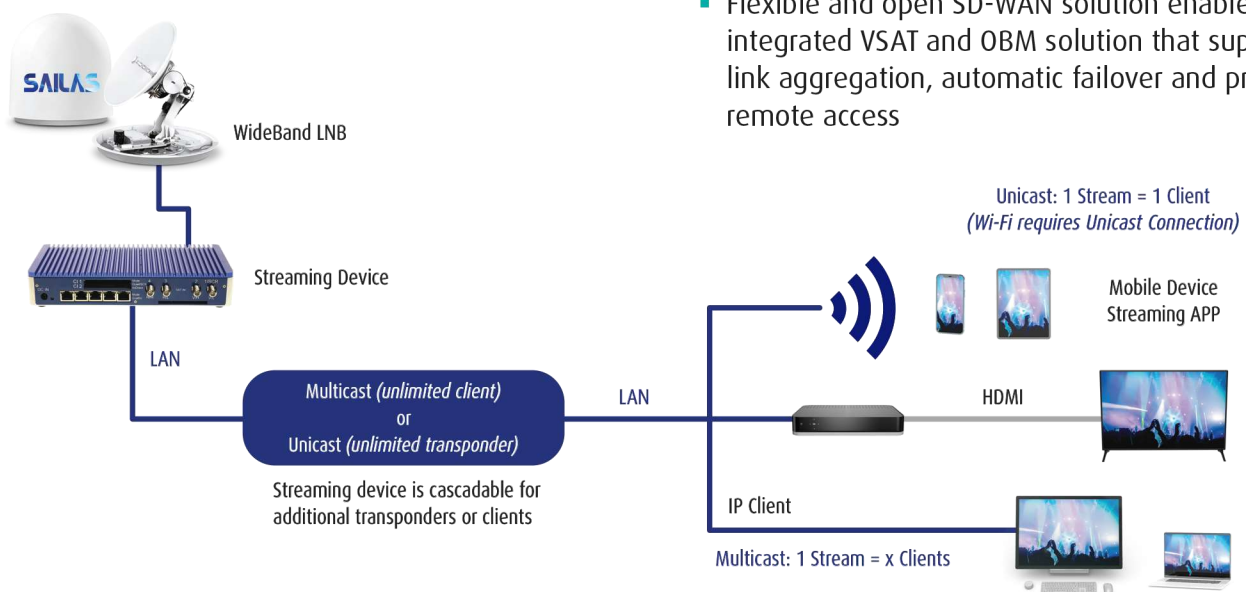

Resilient & Secure Connectivity

- High-powered, wide maritime coverage enabled by our satellite fleet, world-class ground infrastructure and teleport facilities
- Metered and non-metered data plans with flexible contractual terms
- High level of service quality and connectivity solution for data, video, voice, satellite TV, vessel tracking, IoT and other service applications

Enhanced Customer Experience

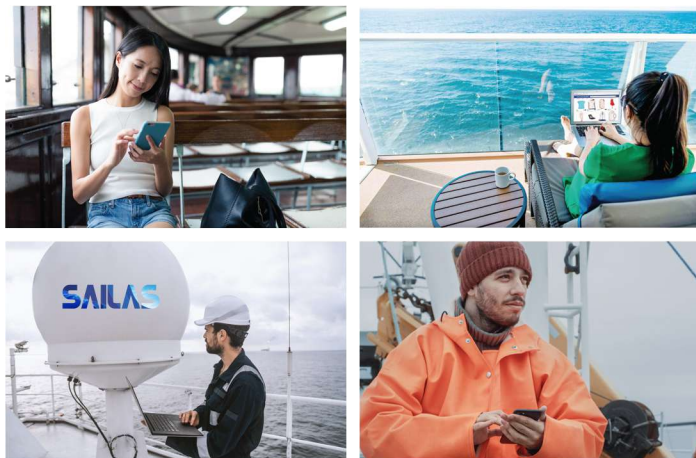

- Antenna bundled packages that include a wide range of high performance maritime antennas with purchase or lease option available
- Video streaming service across selected Ku-band service coverage area, receivable by TV sets, PCs and mobile device via the antenna system on board the vessel
- Flexible and open SD-WAN solution enables an integrated VSAT and OBM solution that supports link aggregation, automatic failover and provides remote access

Quality Video Streaming Experience at Sea

AsiaSat's brand new SAILAS managed service provides high-speed maritime broadband connectivity, enabling seafarers and passengers rapid access to communications and entertainment.
